Features

- Multi-size rectangular shapes
- Textured riven surface
- Slightly chamfered edges
- Not recommended for vehicular traffic

INSTALLATION GUIDELINES: SAND

After excavation, compact the subgrade and install a woven separation fabric. Spread and compact a base of clean, graded, dense aggregate (road base). Typical compacted base thickness is 4-6” for pedestrian applications. Pavers are set on a loosely screeded 1” bed of graded, clean concrete sand. Maintain a joint size of 1/16” – 3/16”. When pavers are set, compact paving stones into sand with mechanical plate vibrator. Joint sand may be spread over paving stones during compaction. Installed pavers should be set 1/8” to 1/4” above final elevations to compensate for any potential settlement. Spread clean dry sand over surface and broom sweep to fill joints.

CROSS-SECTION OF TYPICAL INSTALLATION

Pedestrian traffic

4” – 6” compacted aggregate

1” Bedding Sand

Pavers should slope slightly away from building for water drainage

Color Selections

- Adobe blend
- Golden brown blend
- Granite city blend
- Westchester blend
- Caramel tan*
- Crab orchard blend*
- Oyster blend*
- Pennsylvania blue blend**
- Rusty blue blend**

* denotes premium color
** denotes deluxe color

Nicolock’s Paver-Shield™

- Ultra-dense surface with more color and more protection. Nicolock has color from top to bottom throughout the paver ensuring a lifetime of beauty. Iron oxide pigments are guaranteed not to fade!

CAUTION: Always use a plate compactor with a pad when installing textured paving stones.

NOTE: All measurements are nominal. Variance in square footage or linear footage coverage can be up to 5% depending on joint width. The possible occurrence of efflorescence does not affect the structural integrity of the product. Efflorescence is a normal occurrence in concrete products and will dissipate with normal weathering. The use of concrete as a base or setting bed may increase the possibility of efflorescence.
